

- **Tips & Tricks to make your Income statement more actionable in Power BI**
- **Why it is always better to outsource Powerpoint slide deck preparation**
- **Latest OFAC sanctions on Cryptos**

**Tips and tricks** and a couple of **new features** in Power BI visuals as well as certain **best practices** for making your income statements more **understandable, more actionable, easier to create, more flexible** to work with and much **easier to maintain**.

Let's look at the main features:

- **Hierarchical statement.** You can expand and collapse certain rows - for example, the cost of goods sold in this example comprises product cost as well as service and other costs. We are using a hierarchy with several levels.
- **Included calculations.** You can track KPIs, such as operating income as a per cent of revenue or net income as a per cent of revenue.
- **Live comments.** Different comments are shown to explain your data if you switch between months.
- **Report view switching.** In addition to switching between month-to-date and year-to-date views, you can switch from the income statement to the balance sheet and cash flow views. Each of these views also contains **dynamic comments** and all other features. One simple  **slicer** gets you to access to the holy trinity of financial statements.

## Anatomy of a financial report

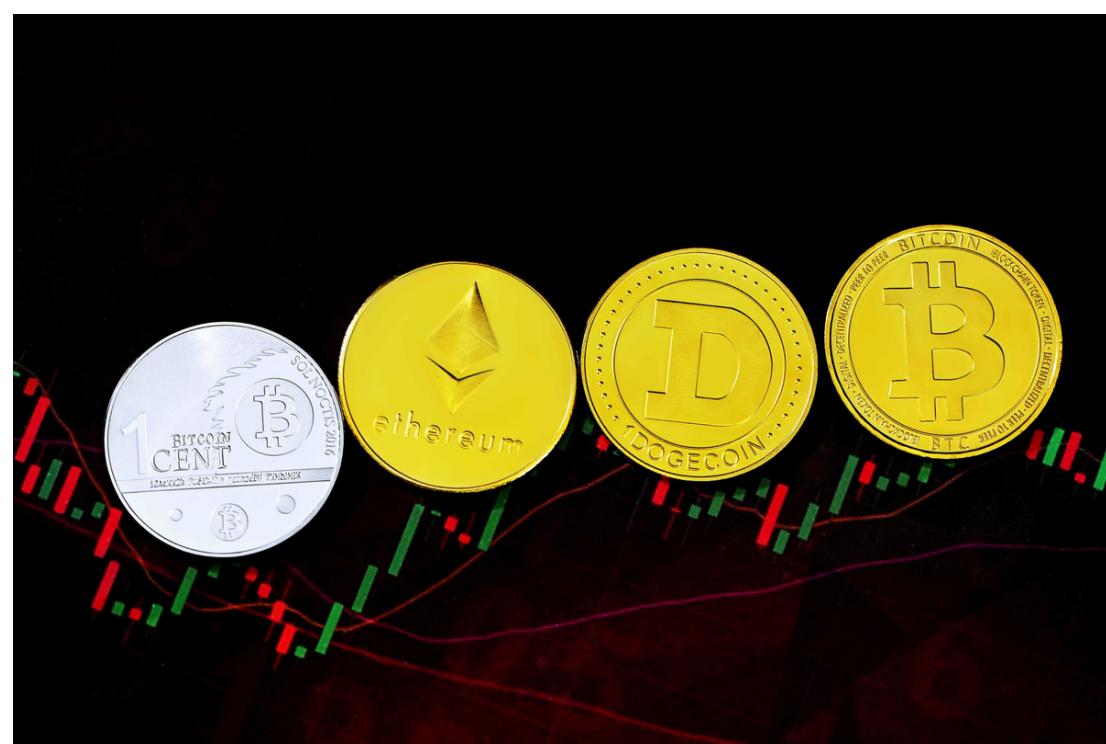

## ***Decks take too long to make***

- Whenever you're working with something that's heavily visual, the design plays a very important role, which is why there are people whose entire career is just graphic design.
- As any graphic designer could tell you, things like text font, image sizes, colors, and even empty space can make or break a piece of PowerPoint slide. The issue here is that when you're working with PowerPoint and you don't have any knowledge of graphic design, the effectiveness of your presentation can plummet. Bad text placement, distracting font, or jarring transitions from slide to slide can disconnect your presentation from your audience rather quickly.
- Beyond excessive time spent on slide design, users also run into a time issue just making all the slides they need. On an average, person who rates his PPT skills as medium can spend close to 4 hours in making a 5 slide deck.
- Why should you waste your time & energy on the job which is purely post-mortem in nature, Renalytiks can provide you these services on demand & in a very crunched timelines for you. You can send your request to [me](#) to explore.

## ***OFAC sanctions crypto for alleged use in money-laundering***

- The US OFAC has recently sanctioned a cryptocurrency "mixer" for alleged use in money laundering.
- It is the first time the OFAC has sanctioned a software protocol, rather than an individual or legal entity.
- The impact of the OFAC sanctions is that anyone/any wallet (read US persons and businesses, and indirectly, citizens and institutions of other countries that have a relationship with US persons or businesses) that interacts with the sanctioned entity/protocol and the mentioned Ethereum addresses would be strictly liable under US law. Since the OFAC announcement, stakeholders in the ecosystem have been divided over the appropriateness and feasibility of the sanctions.
